EVENT PRESENTATION

The integration of digital technology as a catalyst for national economic growth significantly magnifies the repercussions of cyber threats.

In Morocco, addressing cyber risks stands as a key strategic focus, marked by the reinforcement of the regulatory framework and national governance in cybersecurity. However, a predominant challenge in these efforts is the shortage of a skilled Cyber Workforce capable of navigating the technological landscape and cyber resilience processes.

Within the context of the 5th edition of the "Security Conclave Morocco" event, organized by the General Directorate of Information Systems Security (DGSSI) in collaboration with regional counterparts and industry stakeholders, a security challenge is set to take place.

This challenge aims to provide teams from academia, adminsitrations and businesses with an opportunity to apply and test their cybersecurity expertise by immersing themselves in the daily activities of cyber professionals.

Interesting prizes awarded to the winning team in the student category and the professional category.

What is CTF challenge?

A Capture The Flag (CTF) is a form of gamified cybersecurity competition where participants are tasked with various realistic missions related to attacking or defending information systems. Each successful mission reveals a secret, often referred to as a 'flag', which when captured, awards participants points. These points contribute to their overall ranking in the competition, fostering a competitive environment to test and enhance cybersecurity skills.

What are the planned themes during the challenge and qualifications?

System security (Windows, Linux), network security, penetration testing, application security, malware analysis, forensic analysis, incident response, etc.

Who can participate ?

- **Cybersecurity professionals** working in the private or public sector + system administrators or computer developers who are passionate about security.

- **Students** from Moroccan educational institutions (private or public) in computer science fields who are passionate about security.
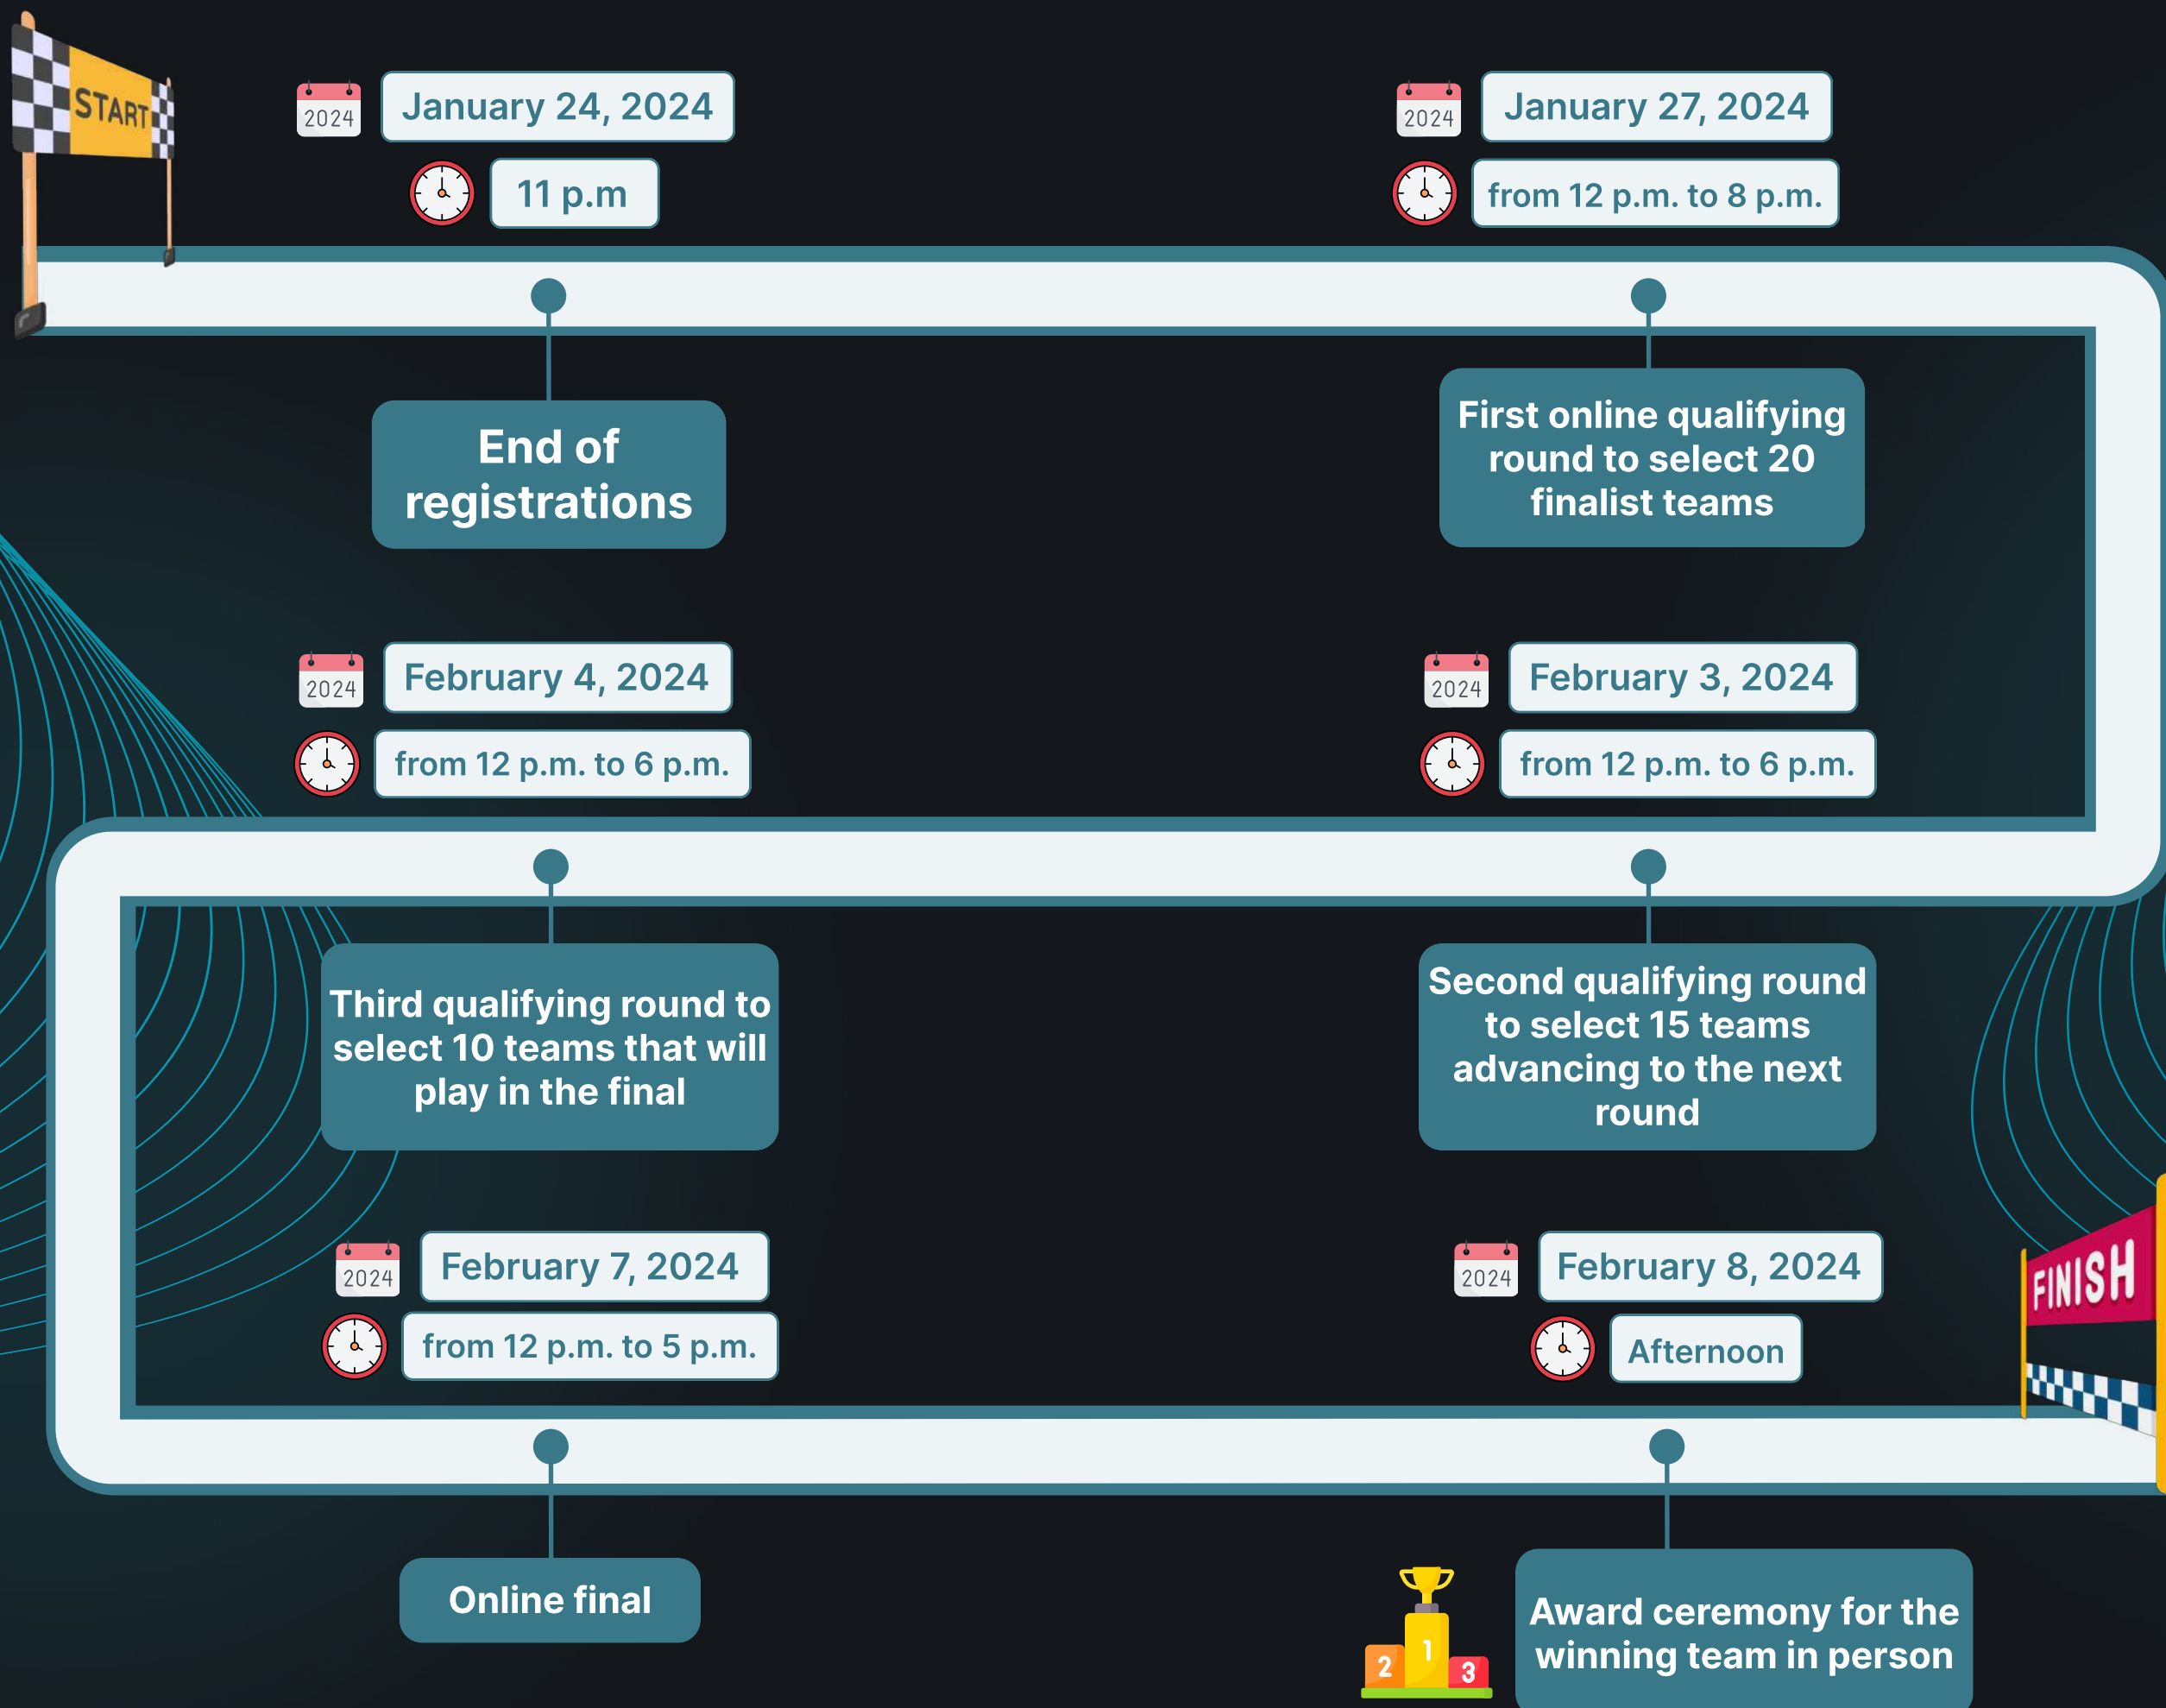

How to participate ?

Create a team of up to 5 members and register using the following links :
- For Students: https://securityconclave.com/dgssi-ctf-2024-students/
- For Professionals: https://securityconclave.com/dgssi-ctf-2024-professionals/
